-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

CLAIMS

Summary

Claim 13 is the independent claim under consideration in this Office Action.

Claims 14-24 are the dependent claims under consideration in this Office Action.

Claim Rejections - 35 U.S.C. § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13-16,18,19 and 22 are rejected under 35 U.S.C. § 102(b) as being anticipated by Toof (862,033).

Toof teaches a swing machine comprising a hook 4 which rotates on a hook rotational axis 5 which can be driven by an inherent motor, as in the usual manner (from page 1, line 71). The rotary hook of Toof is taught as being supported by a carrier 7 and is pivotable along with the carrier about a parallel pivot axis (coinciding with shaft 5) from a working position (solid lines in figure 1) to a changing position (dashed lines) which is at a pivoted distance from the working position and where a bobbin within the hook would be easily accessible from outside the sewing machine instrumentalities for changing thereof. The rotation axis (at 5) is parallel (coincident) and can intersect with

a beveled driving gear 9 (figure 4, for example) or at least crosses at a point both in the working position and the changing position.

ALLOWABLE SUBJECT MATTER

Claims 17,20,21,23 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

PERTINENT CITATIONS

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bianchi and Engel et al. illustrate hooks having pivoting systems for access to bobbins. Moll et al. Illustrate hooks, which are changeable by movement of the hook and bobbin. Rotter et al. Illustrate a hook, which is pivotable with coincident pivot axis for changing the bobbin within the hook.
